- Set-up your Domain on your Hosting account

Login to yorG0dom (domain host) and change DNS settings to hook your domain to your web host

If you use domains from yorG0dom: select “domain names”, “my domains” and click on your domain name. On the domain control panel you will see: “DNS Settings”, click “Change Service” and select “user”. A form will open: enter your host DNS into the first 2 fields:

If you use ChiHosters enter:

dns1.yorgonet.com
dns2.yorgonet.com

- Add-on domain

If you load your new domain to an existing hosting account, go to your cPanel and add your new domain under Add on Domains.

Just follow the instructions.

Create a new email account for your domain and new site, example: `keyword@yourdomain.com`

- Sub-domain

If you prefer setting your new site up as a sub-domain of your existing domain: go to the cPanel, select “sub domains” and proceed according to the instructions. Create a sub domain “keyword.yourdomain.com”

Create an email account for your new site, example:
keyword@keyword.yourdomain.com
